SUMMARY

Third-year Information Technology student at Ho Chi Minh City University of Industry and Trade (HUIT) (**GPA 3.34/4.0**), expected to graduate in 2027. Looking for a **Software Engineer Intern** role.

Hands-on experience building **backend applications** and **database-driven systems** through academic projects, including RESTful APIs, user authentication, and role-based access control (RBAC).

Familiar with **Git-based workflows**, writing test cases, and **debugging**. Enjoy breaking down problems step by step and learning from feedback.

Often take the **team lead role** in academic projects (3–5 members), helping with task planning, requirement gathering, and keeping the team on track.

Core technical skills:

- **Backend:** Built backend features using **ASP.NET MVC** and RESTful API design, including user authentication, RBAC, and form validation.
- **Databases:** Worked with **SQL Server**, **MySQL**, and **Firebase (Firestore)**; familiar with basic schema design, constraints, and writing SQL queries.
- **Programming:** Comfortable with **C#**, **Dart**, and **JavaScript**; applying **OOP** to write organized and reusable code.
- **Tools & Workflow:** Familiar with **Git/GitHub**, code reviews, and have tried basic **Docker** usage.
- **Interests:** Eager to learn more about backend systems, cloud services, and software engineering best practices.

PROJECTS

Smart Medical Booking App

Feb 2026 – Present

A mobile healthcare app for patients to book appointments, search for doctors, view medical records, and interact via a voice-guided interface.

Key Contributions:

- Leading a team of **4 members**, coordinating tasks and supporting teammates throughout the project.
- Designing Firestore data models for users, doctor schedules, and appointment records, learning how to structure NoSQL data to minimize duplicate bookings.
- Applying **Firebase Transactions** and server-side checks via Cloud Functions to validate appointment availability before confirming a booking.
- Implementing **Firebase Authentication** with role-based access control (Patient / Doctor / Admin).
- Integrating **Google Maps API** for location-based clinic discovery.
- Adding a **voice-assisted booking feature** to improve accessibility for elderly and non-tech-savvy users.
- Writing **100+ test cases** covering booking workflows, helping catch and fix several bugs during development.

Key Tech: Flutter, Dart, Firebase (Firestore, Auth, Cloud Functions), Google Maps API

E-commerce Shoe Shop System

Dec 2025

A full-stack web app for online shoe shopping with product browsing, order management, an AI chatbot, and a separate admin panel.

Key Contributions:

- Led a team of **3 members** to design and build the system following **MVC architecture**.
- Designed a relational database with basic normalization and constraints (Check, Unique, Default) to maintain data accuracy.
- Learned and applied **Stored Procedures, Triggers, and Transactions** in SQL Server to handle order operations more reliably.

- Added user authentication, role-based authorization (Admin/Customer), and basic **SQL Injection** protection using parameterized queries.
- Built product catalog, search & filtering, shopping cart, and order tracking features.
- Integrated a simple **AI chatbot** for product Q&A and basic recommendations.
- Used **AJAX** and server-side validation to improve page responsiveness and input safety.

Key Tech: ASP.NET MVC, C#, SQL Server, JavaScript, AJAX

Sports Field Booking System

Nov 2025

A web-based booking platform where users can search and reserve sports fields by time slot, and admins can manage field availability, bookings, and payments.

Key Contributions:

- Led a team of **4 members**, helping split tasks and track progress throughout development.
- Built RESTful backend services using an MVC framework and ORM; used migrations and seeders to simplify database setup.
- Implemented user authentication and role-based access control (Admin/User) using middleware.
- Developed CRUD modules for fields, time slots, bookings, and payments.
- Added time-slot overlap validation to prevent double reservations.
- Used Git/GitHub for version control and participated in code reviews.
- Wrote **80+ test cases** to verify booking and payment flows before submission.

Key Tech: PHP, MySQL, JavaScript, Git

English Vocabulary Learning App

Jun 2025

A desktop app to help users learn and manage English vocabulary, with study mode, word lookup, and basic user management.

Key Contributions:

- Applied **OOP principles** to split the codebase into smaller, manageable classes and modules.
- Built CRUD features to manage **500+ vocabulary entries** stored in JSON files.
- Used public API calls and basic web scraping to fetch example sentences and definitions.
- Added basic login and user roles (Admin/User) to control feature access.
- Fixed file read/write errors that caused data loss on unexpected app closure.
- Designed **5+ UI screens** (login, word list, study mode) for a simple user experience.
- Packaged the app into a standalone executable – received a **perfect practical score** from the instructor.

Key Tech: Python, Tkinter, JSON, REST API

If you are interested in the project aspect, please visit my GitHub at github.com/nhiney for a more comprehensive overview.

These projects represent my main academic work. I have also explored additional topics such as cloud fundamentals, basic system design concepts, and open-source backend repositories as part of my self-learning journey.

EDUCATION

Ho Chi Minh City University of Industry and Trade (HUIT)

Ho Chi Minh City, Vietnam

Bachelor of Engineering in Information Technology

Sep 2023 – Expected Sep 2027

- GPA: **3.34 / 4.0**
- Relevant coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Systems, Software Engineering, Computer Networks.
- Joined a **scientific research competition** to challenge myself, helping develop and design a working prototype together with my team.
- Frequently assigned as **team lead** in group projects (3–5 members), responsible for task breakdown, progress tracking, and supporting teammates during development.
